

Emergency Admissions of over-65s by Primary Cause of Admission

The table below shows the number of emergency admissions to UHBW hospitals (excluding Weston) of patients aged 65 years or over from 2015-2020 inclusive. These are broken down by primary reason for admission. By default, this table shows all of these admissions; you can use the "Dementia Diagnosis" slider on the right to show only those patients with or without a diagnosis of dementia by selecting yes or no.

We were unable to show these figures broken down by which patients were care home residents as we do not hold this data.
