Key to KPI Variation and Assurance Icons

Assurance						Variation			
					No icon				
Consistently Passing Target	Meeting or Passing Target for at least Six Months	Inconsistent Passing and Falling Short of Target	Falling Short of Target for at least Six Months	Consistently Falling Short of Target	No Assurance Icon as No Specified Target	Special Cause of Improving Variation due to Higher or Lower Values	Common Cause Variation - No Significant	Special Cause of Concerning Variation due to Higher or Lower Values	

Special Cause Concern - this indicates that special cause variation is occurring in a metric, with the variation being in an adverse direction. Low (L) special cause concern indicates that variation is downward in a KPI where performance is ideally above a target or threshold e.g. ED or RTT Performance. (H) is where the variance is upwards for a metric that requires performance to be below a target or threshold e.g. Pressure Ulcers or Falls.

Special Cause Concern - this indicates that special cause variation is occurring in a metric, with the variation being in a favourable direction. Low (L) special cause concern indicates that variation is upward in a KPI where performance is ideally above a target or threshold e.g. ED or RTT Performance. (H) is where the variance is downwards for a metric that requires performance to be below a target or threshold e.g. Pressure Ulcers or Falls.

Escalation Rules: SPC charts for metrics are only included in the IQPR where the combination of icons for that metric has triggered a Business Rule – see page at the end for detailed description.

Further Reading / Other Resources

The NHS Improvement website has a range of resources to support Boards using the Making Data Count methodology. This includes are number of videos explaining the approach and a series of case studies – these can be accessed via the following link:

[NHS England » Making data count](#)

Scorecards Explained

Type of Metric; either Breakthrough Objective, Corporate Project or Constitutional Standard/Key Metric.

Name of Metric/KPI.

The most recent data period - this will be the last complete month for the majority, but some metrics are reported one or more

The target, where applicable, for the most recent month. This may be the national target or internal target / planned trajectory.

This icon indicates the assurance for this metric (see above key for summary or see Appendix for full detail).

Response taken based on the Metric Type and the Assurance and Variation Icon for the latest month (see Appendix for full detail). Action is either Note Performance, Escalation Summary, Counter Measure Summary or Highlight

Metric Type	CQC Domain	Experience of Care Metric	Latest Month	Latest Position	Target	Previous Month's Position	Assurance	Variation	Action
Constitutional Standards and Key Metrics	Caring	Monthly Inpatient Survey - Standard of Care	Sep 24	93.2%	94.1%	90.1%			Escalation Summary

The CQC Domain the indicator is covered by. See CQC Website for more information: [The five key questions we ask - Care Quality](#)

The actual performance for the most recent month.

The actual performance for the previous month.

This icon indicates the variance for this metric (see above key or see Appendix for full detail).

Business Rules and Actions

Assurance						Variation			
					No icon				
Consistently <u>P</u> assing Target	Meeting or <u>P</u> assing Target for at least Six Months	Inconsistent Passing and Falling Short of Target	<u>F</u> alling Short of Target for at least Six Months	Consistently <u>F</u> alling Short of Target	No Assurance Icon as No Specified Target	Special Cause of Improving Variation due to <u>H</u> igher or <u>L</u> ower Values	<u>C</u> ommon Cause Variation - No Significant	Special Cause of Concerning Variation due to <u>H</u> igher or <u>L</u> ower Values	

SPC charts for metrics are only included in the IQPR where the combination of icons for that metric has triggered a Business Rule – see page at end for detailed description.

Metrics that fall into the **blue categories** above will be labelled as **Note Performance**. The SPC charts and accompanying narrative will not be included in this iteration.

Metrics that fall into the **orange categories** above will be labelled as **Escalation Summary** and an SPC chart and accompanying narrative provided

Executive Summary – Group Update

Responsiveness

Urgent Care

UHBW ED 4-hour performance dropped to 73.6% in October (76.7% in September) against a March 2026 target of 78% for all attendance types, including type-3 footprint uplift. A combination of demand, high bed occupancy, continued high levels of NCTR and reduction in bed capacity due to the recent critical incident and ward closure, create a challenging clinical, operational and performance environment, thus, impacting on 12-hour total time in the Emergency Department and ambulance handover metrics. For NBT, ED 4-hour performance declined to 61.5% for October 2025 (68.7% with footprint uplift). NBT is actively working with the GIRFT team to align their findings with their UEC programme and a summary of this was presented at NBT's Quality Outcomes Committee.

The System ambition to reduce the NC2R percentage to 15% remains unachieved. Delivery of the NC2R reduction is a core component of the Trusts ability to deliver the 78% ED 4-hour performance requirement for March 2025, as of yet, there is no evidence this ambition will be realised. However, the refreshed ICS discharge programme is underway and alongside a detailed redesign of the 15% NCTR Ambition Plan being developed in partnership with all system partners. In the meantime, internal hospital flow plans continue to be developed and implemented across all sites.

Elective Care

UHBW continue to anticipate elimination of 65 week waits during 2025/26, noting that there were seven paediatric dental patients waiting beyond 65 weeks at the end of October 2025 due to unforeseen sickness absence within the service and one trauma and orthopaedic patient waiting in excess of 65 weeks, picked up through the trust validation process. All eight patients have been rebooked to be treated in November 2025, with no further breaches currently forecast. More generally, the potential exception to 65 week wait elimination relates to the previously reported national shortage of graft material, noting that NHSE formal dispensation for cornea graft still applies. Both Trusts have set the ambition that less than 1% of the total waiting list will be >52 weeks by the end of March 2026, with NBT already achieving this ambition.

Diagnostics

For October, NBT's diagnostic performance was just outside of the national constitutional standard, reporting at 1.1%. UHBW position in October has improved again to 12.7% but fell short of the October target of 6.9%. Performance continues to improve across many diagnostic modalities and recovery plans are in place for the small number of modalities which require additional support to achieve the recovery trajectory, with improvement in performance expected in year.

Cancer Wait Time Standards

During September, UHBW remains compliant with the 31-Day and 62-Day standards but fell short of the 78% trajectory set for the Faster Diagnosis Standard (FDS), reporting 75.1%. The expectation is that the FDS position will recover during Q3, and the March 2026 target of 80% achieved.

At NBT, FDS and the 62-Day Combined position were off plan for the month of September. 31 Day reported to plan. The work previously undertaken has been around improving systems and processes, and maximising performance in the high-volume tumor sites. The current position is due to challenges in the Urology and Breast pathway; there are improvement plans in place to reduce the time to diagnosis and provide sufficient capacity to deliver treatments.

Both trusts are part of the SWAG programme of improvement called 'Days Matter' which will focus on Urology pathways at NBT and Colorectal at UHBW.

Executive Summary – Group Update

Quality

Patient Safety

In UHBW there was one MRSA case in October, none for NBT. 2025/26 year to date is five cases for UHBW, one fewer than the same period in 2024/25. Improvement work is focussed on intravenous line care, details in the report. NBT has seen two cases for the year to date.

In UHBW there were eight cases of Clostridium Difficile in October, five Hospital Onset Hospital Acquired (HOHA) and three Community Onset Hospital Acquired (COCHA). The Trust has had 84 cases 2025/26 year to date, fewer than 91 in the same period in 2024/15. Improvement work is focussed on timely stool chart completion and stool sampling to identify potential cases early and reduce the possibility of cross infection in the clinical environment. For NBT there were ten cases in October (seven HOHA and three COCHA), marginally above year-to-date trajectory. Areas where we have seen increased cases have been having a planned RED clean with liaison with both Facilities and Ops to achieve. Efficacy cleaning audits have also highlighted several rectifications to the environment particularly toilet backs that continue to be replaced

In UHBW there were 137 falls (3.889 per 100 beddays) below the Trust target of 4.8 per 1000 bed days. There were 97 falls at the Bristol site and 40 falls at the Weston site. There was one fall associated with moderate physical and/or psychological harm and one fall associated with a fatal outcome which is subject to a rapid incident review. Quality improvement projects for the next 12 months, include work to ensure consistent use of Abbey Pain Scale, improving nutrition and hydration for persons with dementia and work on a falls management plan for non-inpatient areas. NBT has seen an upward trend for pressure injuries and this is being reviewed urgently with divisional leads, safeguarding and patient safety to identify themes and agree improvement actions

Since the implementation of Careflow Medicines Management (CMM) for digital prescribing at UHBW in June 2025, Venous-thrombo embolus risk assessment (VTE RA) completion rates have improved by approximately 10% and continue to rise. However, an increase in VTE prescribing incidents has highlighted a gap between completing VTE RAs and prescribing VTE prophylaxis (VTEP). Process changes are described on the relevant slide. For NBT CMM was implemented full in October 2025, with an immediate positive impact on VTE risk assessment recording. Focused work on the timeliness of RAS completion will be undertaken (within 14 hours of admission per NICE guidance).

During October 2025, UHBW recorded 354 medication incidents. No medication incidents were reported as causing moderate or above harm. Incidents related to the prescribing and administration of medicines via subcutaneous syringe drivers on CMM have led to a Multi-Professional Safety Review recommending CMM changes be completed and a Trust wide safety alert to raise awareness of the new risks identified. NBT recorded 144 medication incidents, the overall trend continuing to illustrate a positive variation from the historic mean position. An increase in moderate or above harm incidents to six is being investigated and will take account for the CMM implementation and whether this is a relevant factor.

Patient & Carer Experience

For UHBW, we have seen an increase in operational pressures with a reduced bed base since September and so we may see a correlation between this and increase in complaints received over the coming months. Specific work has commenced in response to an ongoing trend identified within clinical care concern. The data is showing ongoing recovery to improve performance. The PALS and complaints team have held a varying backlog, this has now been resolved and maintained for two months through focussed support and alignment of processes with NBT. Within NBT the monthly complaints figures continue to trend above the historical mean, with 75 received in October and a static position for PALS concerns. Of these the highest volume (11) related to emergency Medicine, the rest were evenly spread across other specialities. Timely response improved from 60% to 73% in October, reflecting the positive impact of ASCR Division's recovery plan.

Executive Summary – Group Update

Our People

Please note the following variance in metric definitions:

Turnover – NBT report turnover for Permanent and Fixed Term staff (excluding resident Drs) whereas UHBW calculate turnover based on Permanent leavers only

Staff in Post – NBT source this data from ESR and UHBW source this data from the ledger. Vacancy is calculated by deducting staff in post from the funded establishment.

Work is in progress to move towards aligned metrics and where appropriate targets in common.

Turnover

- **NBT** turnover is 9.8% in October, below the NBT target of 11.3% for 2025/26
- **UHBW**, turnover is 9.5% in October and below target.

Vacancy Rate

- **NBT** is 8.1%, small reduction in vacancies driven by support worker recruitment and recruiting to new Ward 7b establishment
- **UHBW** is 4.3%, an increase from 3.5% in September and above target, triggering an escalation summary.

Sickness

- **NBT** rate is 4.7%, above the target of 4.4%. Early opportunities are being identified through Operational Planning and collaborative data analysis with UHBW. NBT is carrying out detailed work on long term absence as the predominant driver of the position.
- **UHBW** rate is 4.5% in month, a slight increase to last month but does not trigger an escalation summary against the cumulative annual target .

Essential Training

Reporting was refined to focus on the 11 mandated subjects and Level 1 Oliver McGowan (OMMT) eLearning. Level 2 OMMT compliance was separated to better track progress, which continues to improve with expanded ICB training. Future reports will monitor progress toward the ICB's target of 66% for Level 2 compliance by year-end. The group remains on track to meet this threshold.

- **NBT:** Compliance for the top 11 subjects rose to 89.3%, exceeding the former 85% NBT target, with strong growth in Level 1 OMMT eLearning. Future compliance is aligned to the UHBW target rate of 90%. Level 2 OMMT compliance is improving steadily (currently 23.5%), despite challenges from staff absences and OPEL 4 pressures. On-site ICB sessions are increasing training capacity.
- **UHBW:** Overall compliance sits at 90.1%, slightly above target, with Level 1 OMMT at 84.6%. Level 2 compliance stands at 38.6%—26.0% for non-clinical webinar sessions and 45.2% for clinical face-to-face sessions. Expanded ICB training is supporting increased uptake.

Executive Summary

Finance

In Month 7 (October), NBT delivered a £0.6m deficit position which is £0.7m adverse to plan. Year to date NBT has delivered a £3.5m deficit position against a £2.8m deficit plan.

UHBW delivered a £1.2m surplus in month 7, against a surplus plan of £1.8m. UHBW's year to date deficit is £8.3m, £0.7m adverse to plan.

Pay expenditure within NBT is £1.1m adverse to plan in month. This is driven by overspends in nursing and healthcare assistants due to escalation and enhanced care, under-delivery against in-year savings which is offset by vacancies in consultant and other staff groups.

Pay expenditure in UHBW is £2.0m adverse to plan in month. This is driven by staffing exceeding budgeted establishments, particularly across nursing budgets due to escalation and enhanced care plus additional medical costs. The position is marginally offset by higher than planned pay savings.

The NBT cash balance as at the 31 October 2025 is £29.0m, £6.2m lower than planned, a £48.4m reduction from 31 March 2025.

The UHBW cash balance as at the 31 October 2025 is £50.0m, £17.2m lower than planned, a £22.3m reduction from 31 March 2025.

0
Latest Month's Position
401
Performance / Assurance
Common Cause (natural/expected) variation, where target is less than lower limit where up is deterioration
Trust Level Risk
1940 - risk that patients will not be treated in an optimum timeframe, impact on both performance and quality (20).

What does the data tell us?

The number of 12 hour trolley waits increased compared to the previous month to 401.

Actions being taken to improve

See previous slides – all actions are relevant to 12-hour DTA reduction.

Impact on forecast

See previous slide.

What does the data tell us?

The number of 12 Hour trolley waits increased throughout October to 562 compared to 213 in September

Actions being taken to improve

Note actions from previous two slides

Impact on forecast

Along with improvement work noted against the 4-hour and 12-hour standard, it is anticipated that the number of 12-hour trolley waits will be reduced during November as a result of the enhanced focus and re-launch of the ED Quality Standards in relation to “Speciality Reviews” in particular.

upper limit and down is
deterioration.
Corporate Risk
Risk 7769 - Patients in the
Trust's EDs may not receive
timely and effective care (20)

What does the data tell us?

The proportion of handovers completed within 15 minutes has declined to 27.4%, this is against a backdrop of 8.5% growth in conveyances compared to October 2024 and the highest number of conveyances this year. Despite the challenged position, total lost hours remains less than half what it was in April 2025. October was also the best month this year for eliminating long handovers, with none over 3 hours 15 minutes.

Actions being taken to improve

Key areas of focus for November link to the Test of Change Week. These include a front door audit with SWAST on 21 November to review the proportion of conveyances which seem suitable for alternative pathways, and a test of change for 19-25 November whereby SWAST crews are being asked to ring through to the Community Emergency Medicine Service for any non pre alter patients prior to bringing them to Southmead ED. The aim is to see how many can be safely managed through a non-ED pathway.

Impact on forecast

Learning from the call before convey test of change will be key in BNSSG to unlocking congestion in ambulance bays and promoting alternative pathways with SWAST.

What does the data tell us?

Ambulance handovers within 15 mins have worsened across UHBW throughout October at 36.2% compared to September at 42.5%. Notable decrease observed at WGH from 45.1% (Sep) to 35.9% (Oct). This is against a backdrop of a 13.7% growth in conveyances at WGH compared to October 2024.

Actions being taken to improve

Implementation of the updated SWAST Timely Handover Policy in response to the new NHSE KPI: zero tolerance to handovers over 45 mins - has resulted in a collective response within UHBW to embed additional actions and strengthen existing processes in support of timely ambulance handovers.

Impact on forecast

It is anticipated that the ongoing improvement work will continue to contribute to an improved position in the forthcoming months with improvement noted in early November.

Responsiveness

UEC – Ambulance Handover Delays

Latest Month's Position
10.0%
Performance / Assurance
Special Cause Improving Variation Low, where down is improvement but target is less than lower limit.
Corporate Risk
Risk 7769 - Patients in the Trust's EDs may not receive timely and effective care (20)

What does the data tell us?

The proportion of handovers over 45 minutes increased in October 2025 to 18% but remains within control limits and below the mean, and an improved position compared to October 2024.

Actions being taken to improve

The Trust Medical Director led a Patient Safety and Experience Review during November into the impacts of SWAST's timely handover plan, and handovers exceeding 45 minutes. There is an action plan which will be held at UEC Board and focuses across a range of areas aimed at reducing the impacts of long handovers of patients and staff.

Actions planned for the Test of Change Week 19-25 November are also all relevant to improving offload delays.

Impact on forecast

The above ongoing work is expected to stabilise the position and promote an improving position again during December.

What does the data tell us?

Ambulance handover times within 45 minutes have remained stable throughout October compared to September (10.3%)

Actions being taken to improve

A programme of work has been established focussing specifically on maintaining the zero tolerance to >45-minute ambulance handovers across UHBW. Actions have been identified across the BRI and WGH ED sites in particular - that focus on improving timelier flow of patients out of ED and ensuring more patients are directed to alternative services such as Same Day Emergency Care where appropriate. This in turn will enable continued improvements in ambulance handover times.

Impact on forecast

The improvement work outlined above is expected to contribute to the ongoing achievement of the <45- minute average ambulance handover time. November forecast c4%

What does the data tell us?

No Criteria to Reside (NCTR) increased to 23.3% and remains significantly above the BNSSG system target of 15%. There are particular issues for patients accessing Pathway 3 in North Somerset and SSARU in all localities.

Actions being taken to improve

There are some key areas of focus currently for NCTR reduction:

1) SSARU delays – BNSSG UEC Operational Delivery Group endorsed NBT's proposals to support SSARU delays, actions now in train include increasing SSARU provision at SBCH (offsetting this with additional Pathway 2 beds which have been purchased) and scoping the provision of additional Integrated Community Stroke Service provision by Sirona.

2) System work on the Home Based Intermediate Care offer continues, with demand and capacity modelling part of the next phase of the work to ensure right provision in the right place at the right time.

3) A proposal for a system change team to lead the work to right size the community intermediate care inpatient capacity across BNSSG. This will be a strategic piece of work starting this financial year and running across part of next year.

Impact on forecast

We expect to see a reduction in NCTR as a result of the work outlined above, with the 15% system ambition remaining in place.

What does the data tell us?

No Criteria to Reside (NCTR) position deteriorated in October, 22.1% (September: 21.4%) ; BRI: 20.1% (September 19.5%); Weston 30.3% (September 29.2%). High proportion of complex patients requiring specialist care with lack of beds capable/available to support.

Actions being taken to improve

Development of system-wide improvement plans to deliver 15% NCTR position continues. System focused on:

Admission avoidance through various initiatives e.g. CEMs 5 days a week + telephone shifts

Transformation work launched with national support by iMpower aimed to re-design of the Home First Offer. Involving the development of a Home-Based Intermediate Care model,(HBIC): Test and Learn to start Nov/Dec roll out BAU Jan 26

Development of an IP intermediate Care model:

Capacity and Demand Modelling and Action Plan to reduce community LoS to be developed

HFT improvement projects: - CHCFTT - reduction of average 2.8 days

MCA/BID - reduction of average 1.3 days

Early Supported Discharges enables patients to leave hospital before their package of care start date with family support: 113 patients left hospital early saving 412 bed days in October.

Impact on forecast

System ambition of reducing NCTR to 15% remains (BRI 11%; WGH 19%).

What does the data tell us?

As anticipated, September's performance deteriorated and did not meet the delivery trajectory. This was due to a number of short-term operational issues, in particular short staffing in head and neck and gynaecology due to sickness and vacancies.

Actions being taken to improve

All vacant ENT posts have now been filled, which is expected to support the service in returning to a 7-day turnaround time for appointments by January. This improvement should be sufficient to deliver 80% performance at Trust level at year end as required. It is also noted that September is traditionally a lower performing month due to the impact of patients wishing to delay appointments from August due to summer holidays. No adjustment to the 28-day waiting time is permitted in that situation. Patient choice accounted for 21% breaches this month, compared to a usual average of circa 10%.

Impact on forecast

The early forecast for October suggests a significantly improved position, noting that the impact on the standard of the bed situation at UHBW following closure of two wards is not yet known. Outpatient activity is a far bigger driver than admitted care for this standard, however use of day case or outpatient areas as escalation capacity for inpatients could impact.

% to Stroke Unit within 4 Hours

What does the data tell us?

There has been a small improvement in the proportion of stroke patients admitted to the stroke unit within four hours of arrival.

Actions being taken to improve

The implementation of the revised flow processes to support timely transfers from the Emergency Department to the stroke unit. Ongoing targeted improvement work within the Stroke Assessment Area and the wards to enhance patient flow and reduce delays.

The Hot Bed SOP is finalised and still going through governance process. This is to support the creation of beds on a consistent basis, ensuring availability for new patients.

Impact on Forecast

The improvement plan continues to be rolled out. However, performance remains challenged by high bed occupancy (including NCTR patients) and sustained pressure within the Emergency Department.

Stroke Thrombolysis within 1 hour

What does the data tell us?

Performance in September has dipped just below the 60% target. However, this data is based on a small patient cohort which can influence variability. Several of the recorded breaches are attributable to valid clinical reasons. There is also a growing trend toward considering extended thrombolysis on a case-by-case basis, which often requires additional investigations to support safe and informed decision-making. While these cases remain infrequent, this tailored approach may result in longer door-to-needle times, with the overarching goal of improving patient outcomes.

Actions being taken to improve

NBT was one of 12 trusts nationally taking part in the Thrombolysis in Acute Stroke Collaborate (TASC) prestigious programme, aimed at increasing thrombolysis rates and improving door-to-needle times. NBT was the highest performer of all 12 centres that recently completed the last cohort – singled out for their improvement. The number of patients now thrombolysed is at our highest number and reflects the hard work and dedication of the team to improve thrombolysis rate.

Impact on Forecast

The projected 12-month outcome includes a potential doubling of thrombolysis treatment rates, alongside a significant improvement in average door-to-needle times.

90% Time in Stroke Unit Performance

What does the data tell us?

Performance has declined very slightly from improvements made in Feb-Jun, primarily due to high stroke bed occupancy. It however remains higher than our period of previous similar occupancy. Some NCTR patients are being accommodated outside the Stroke Unit, which is negatively affecting this metric. Stroke Unit within 4 hours also impacts this metric. Overall stroke occupancy correlates with 90% in stroke unit. The challenge is with community provision and this has been escalated through the ODG and HCIG through a review of service against the original business case.

Actions being taken to improve

Actions already described in Stroke unit within 4 hours metric – including the Hot bed SOP which is finalised and going through governance process. System level work commenced to assist in reducing occupancy levels, this involves engagement from ICB with view to enhancing community provision and releasing acute capacity.

Impact on Forecast

Current occupancy levels remain high with a spike in Sept admissions. We expect this to come through in Oct figures with a drop before then recovering.

% Seen within 14 Hours by a Stroke Consultant

What does the data tell us?

There has been a sustained (albeit small drop) for performance in Sept for the percentage of patients reviewed by a stroke consultant within 14 hours of admission.

Actions being taken to improve

Recent performance improvements have been supported by a more sustainable and consistent consultant rota. From August, the timing of the HASU board round was adjusted to start slightly later, enabling earlier PTWR and improving consultant review times for patients admitted overnight. Additionally, progress has been made on enhancing documentation processes: updates to the paper admission proforma and the Careflow narrative form are underway to improve the accuracy and completeness of data capture for this metric.

Impact on Forecast

With current workforce stability and enhanced data capture processes, strong performance in timely consultant reviews is expected to continue.

What does the data tell us?

- There has been no change in incidence of grade 2 PU with October being the same as September, this performance remains a variation to the norm, which we are investigating.

•Actions taken to improve

- A sub-working group formed by the Tissue Viability Steering Group (TVSG) has met with representation from divisional matrons, safeguarding, and patient safety teams. The groups focus is on identifying strategic themes related to the prevention and management of pressure ulcers (PUs) and targeted interventions to reduce PU incidents, this being divisionally led. HSCW TV training as also been increased to monthly as a result of this group.
- Increased cases have been generally in Medical wards, matching an increased demographic of complex patients.
- Focused intervention work is underway with the Emergency Department (ED), including the procurement of Repose overlay mattresses for trolleys and with ITU within ASCR.
- Divisional representatives will be expected to contribute and present upward reports to the TVSG, outlining identified PU themes and proposed mitigation strategies
- A Bed and Mattress meeting has been reestablished by the Clinical Equipment Manager to review current stock and address operational concerns.

Impact on forecast – The above actions anticipate that there will be a reduction in PU incidents.

No narrative required as per business rules.

No Trust Level Risk

What does the data tell us?
With no new cases reported in October this totals two this year to date.

Actions taken to improve
The HCAI improvement and reporting group continues to have oversight and monitor potential risk factors. Work is continuing on influencing factors surrounding screening and decolonisation as well improvements with vascular management, access and education.

NBT are taking part in some regional improvement work focusing on MSSA and MRSA reduction, learning from all MRSA cases are shared with the ICB

Impact on forecast
The intention is to improve the position with the plans outlined above as well as learn from other trusts and ICBs.

What does the data tell us?
There was one MRSA case in October. 2025/26 year to date is five cases, one fewer than the same period in 2024/25.

- Actions being taken to improve**
- Previously reported actions continue using audit data to drive improvements in MRSA compliance and targeted patient screening and decolonisation.
 - A refresh of the care pathway and decolonisation protocols is underway being led by the Divisional IPC Matrons. This work has been shared with the Practice Education facilitators (PEF's).
 - A QI improvement group has been set up to focus on the use and management of Peripheral venous catheters (PVC's). Auditing is underway. Results will be analysed to indicate the focus of further improvement work.
 - Additional focus work directed toward the education on PICC line care
 - A quality improvement group has been convened to take forward associated improvement work regarding intravenous (IV) line care.

Impact on forecast
The intention is to continue vigilance and risk reduction interventions to reach and sustain zero cases.

Common Cause (natural/expected) variation where last six data points are both hitting and missing target, subject to random variation.
Corporate Risk
Risk 1598 - Patients suffer harm or injury from preventable falls (12)

No narrative required as per business rules.

What does the data tell us

During October 2025: there have been 137 falls, which per 1000 bed days equates to 3.889, this is lower than the Trust target of 4.8 per 1000 bed days. There were 97 falls at the Bristol site and 40 falls at the Weston site. . There was one fall associated with moderate physical and/or psychological harm and one fall associated with a fatal outcome which is subject to a rapid incident review.

The number of falls in October 2025 (137) is fewer than September 2025 (143). There was one fall with moderate harm and one fall with fatal harm in October 2025, this is fewer than the previous month (7).

Risk of falls continues to remain on the divisions’ risk registers as well as the Trust risk register. Actions to reduce falls, all of which have potential to cause harm, are provided below.

What does the data tell us?

During October 2025, NBT recorded 144 medication incidents of these, six medication incidents were reported as causing moderate harm to a patient.

This figure is higher than previous months and work is underway with both the Patient Safety team and the EPMA project team to consider the impact of the CMM roll out on patient safety this month.

Actions being taken to improve

Over the past few months, the Medicines Governance Team and Patient Safety team have been taking stock of the success of, and challenges faced by the Medicines Safety Forum – a group previously in place to consider and address medicines safety challenges. At present the monthly meetings have been paused to reflect on the learning to date and work is in progress to consider how we approach Medicines Safety as a hospital group and inform our Medicines Safety Strategy going forward.

A resource proposal detailing the Pharmacy staffing required to support medicines safety improvement work going forward is being written for sharing with colleagues.

What does the data tell us?

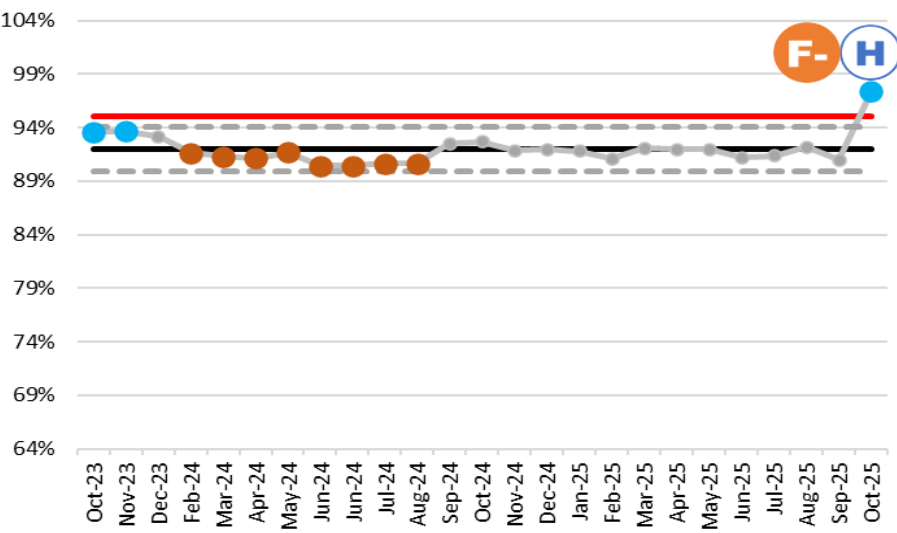

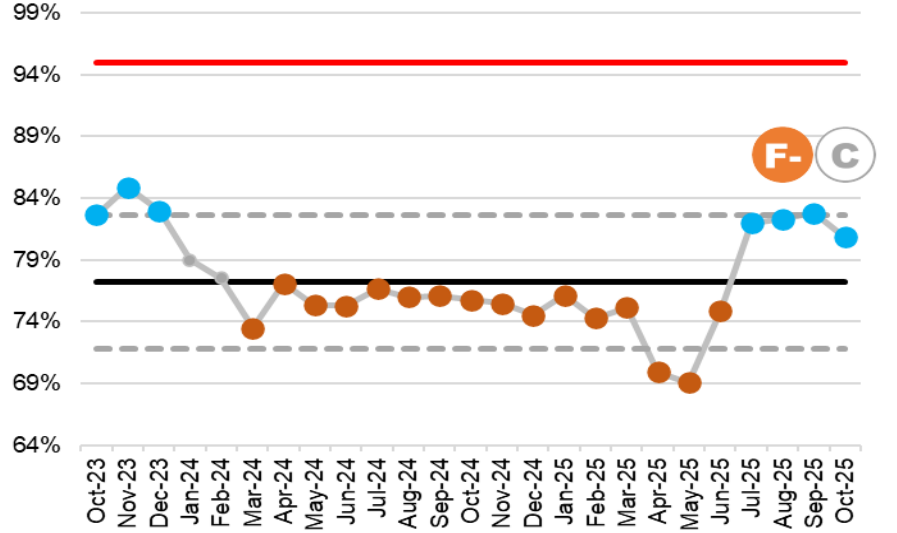

During October 2025, UHBW recorded 354 medication incidents. No medication incidents were reported as causing moderate or above harm. The dataset pre-April 2024 is based on previous harm descriptors in place in the Trust. The data indicates a good reporting culture with few harm incidents compared to number of incidents.

Actions being taken to improve

No specific themes have been identified from the low number of medication incidents associated with moderate and above harm following review at the multidisciplinary Medicines Governance Group. The implementation of Careflow Medicines Management will help reduce risks some associated with medicines use.

Incidents related to the prescribing and administration of subcutaneous syringe drivers on CMM have led to a multiprofessional safety review recommending CMM changes be completed and a Trust wide safety alert to raise awareness of the new risks identified. Specific learning is shared across the Trust via the Medicines Safety Bulletin and with BNSSG system colleagues via system medicines quality and safety meetings. This report has been developed collaboratively by the UHBW and NBT medicines safety teams.

A resource proposal detailing the Pharmacy staffing required to support medicines safety improvement work across the Hospital Group going forward is being written for sharing with colleagues.

<div><div>Latest Month</div><div>Oct-25</div><div>Target</div><div>95.0%</div><div>Latest Month's Position</div><div>97.4%</div><div>Performance / Assurance</div><div>Special Cause Improving</div><div>Variation High, where up</div><div>is improvement but</div><div>target is greater than</div><div>upper limit</div><div>Trust Level Risk</div><div>No Trust Level Risk</div></div>	<div><div>VTE Risk Assessment Completion</div></div>	<div><div>VTE Risk Assessment Completion</div></div>	<div><div>Latest Month</div><div>Oct-25</div><div>Target</div><div>95%</div><div>Latest Month's Position</div><div>80.9%</div><div>Performance / Assurance</div><div>Common Cause</div><div>(natural/expected) variation,</div><div>where target is greater than</div><div>upper limit down is</div><div>deterioration.</div><div>Corporate Risk</div><div>Risk 8448 - Risk that VTE</div><div>prophylaxis is not prescribed</div><div>when indicated (16)</div></div>
--	--	---	--

What does the data tell us?

- The introduction of the digital VTE RA chart in July 2023 coincided with a decline in completion rates.
- The standalone VTE RA form did not fit with the workflow, leading to omissions in performing the task
- After the initial decline, the completion rate has remained fairly static, indicating: The issue may not be worsening, but no significant improvement efforts have yet taken hold or been effective, indicating the issue with standalone digital tasks

Actions that are being taken to improve both VTE RA and prescribing of thromboprophylaxis:

- October 2025: . Full implementation of CMM across all hospital sites.
- Ward-Level interventions, included:
 - Direct engagement with staff on wards;
 - Reminders about the importance of thromboprophylaxis
 - Encouragement to question omissions in prescribing.

Impact on forecast:

The implementation of CMM (electronic prescribing) across the trust has already shown a marked improvement in VTE risk assessment compliance, (97% October); however – this is only showing those patients who have a VTE RA done – but not within the first 14 hours (as per NICE) .We are now able to capture this data. We expect the change in data collection will influence the figures in a negative way, while we work with the clinical teams to encourage timely VTE RA completion

What does the data tell us?

Since CareFlow Medicines Management (CMM) implementation in June 2025, VTE risk assessment (RA) rates have improved by around 10% and are continuing to improve. However, in CMM there is a decoupling of the VTE RA and actually prescribing VTEP which is a concern that we are working to improve.

Actions being taken to improve

- As of 10th November, VTE RA's have become mandatory on the Acute Medical Admissions Unit (initially not mandatory to allow for emergency prescribing on CMM).
- Following discussion at VTE Steering Group , Physician Associates are now able to complete VTE RAs again from November following permission changes when switching to CMM. This has been added to the VTE Prevention Policy.
- Working with IT to have VTE RA and VTE prescribing visible on ward view boards again following CMM.
- Teaching session for resident doctors (F1 and F2) on VTE in December.
- Encouraging ward rounds to take a device with them to look at the chart whilst reviewing the patient.

Impact on forecast

We anticipate completion rates to increase further as admission through AMU is often the first step of a patient's journey in hospital, and by allowing PAs to complete VTE RAs as well and then prompt prescribers to prescribe VTEP. The ward view boards will allow for targeted interventions.

Corporate Risk

Risk 924 - Delay in hip

fracture patients accessing

surgery within 36 hours (15)

No narrative required as per business rules.

Please note due to a data process delay the data is 2 months in arrears.

What does the data tell us?
In October, 73 patients were eligible for the best practice tariff (BPT), 31/73 patients (42%) were operated on within 36 hours of admission, 71/73 patients (97%) received ortho-geriatric assessment within 72 hours, resulting in 31/73 patients (42%) met all BPT criteria.

Main reasons for missed targets:

- 42 patients missed the time to surgery target, due to lack of theatre space (36), a specialist surgeon required (2), medical optimisation required (1), reversal of anticoagulants (2) and missed diagnosis (1).

Actions being taken to improve:

- Extra theatre space is created where possible to reduce theatre delays

Impact on forecast:

- When it is possible to create extra theatre capacity risk of delayed surgery for patients with fractured neck of femur can be reduced.

What does the data tell us?

- The Inpatient FFT score (total % of patients rating their experience as ‘Very good’ or ‘Good’) has continued to decrease from 90.9% in September to 90.2% in October.
- The top negative themes rising from comments are ‘Staff’, ‘Communication’ and ‘Waiting Time’.
- Several areas have shown a decline in positive scores compared with the previous month. Surgical SDEC is particularly notable, with a 7.5% drop in positive comments and an 18.9% increase in negative comments, based on 116 responses. This marks the third consecutive month in which positive scores have fallen. However, there has been no corresponding increase in the number of complaints or concerns for Surgical SDEC.

Actions taken to improve

- FFT discussed at Divisional Patient Experience Group meeting to advise Divisional Patient Experience teams of areas of concern.

Impact on forecast

- Because several areas show varying levels of decline, each influenced by different response rates, it is difficult to predict the forecast based on the current pressures on the Trust. It is also important to note that several areas are showing an increase in positive scores.

No narrative required as per business rules.

What does the data tell us?

- In October, the Trust received 75 complaints, which was 15 more than the previous month.
- Since April, the average number of complaints received per month has been 66. However, 70 complaints were received in June and 74 were received in July.
- Emergency Medicine received the most complaints (11), the rest were spread across 28 other specialities with no spike in any area.
- Clinical Care and Treatment was the most selected lead theme of the complaints received.
- We have not seen a decrease in the number of PALS concerns received that correlates with the increase in complaints. The number of PALS concerns received in October remains high (191).

Actions being taken to improve

- We will continue to monitor, keeping a close eye on any spikes in particular services or areas.

Impact on forecast

- It is difficult to predict the number of complaints received each month. This fluctuates largely based on patient's experience of the care and treatment they receive and often reflects the operational pressure faced by the Trust.

No narrative required as per business rules.

What does the data tell us?

- Current position driven by long term absence
- Our draft 26/27 Group target is 4.4% - recognised as challenging but a strong focus on wellbeing and absence management to deliver, in line with focus in 10 Year NHS Plan and NHS England Medium Term Planning Framework.

Actions being taken to improve

People Systems and Data Team

- Diagnostic of use of 'Other Known Reasons' absence reason use as absence growth has been predominantly in this area and impacts ability to design wellbeing and absence management interventions - **Action plan Q4 2025/26**

People Advice Team

- Analysis of Trust-wide and Divisional level data on long term absence reasons to understand what is contributing to longevity of long-term sickness across the Trust - **Dec 25**.
- Review return to work process to allow early identification and triangulation of absence causes and effective approaches for management - **Feb 26**

Staff Experience Team

- EAP familiarization plan in development to increase awareness and service utilisation across all divisions **by Q2 - 2026**
- HG have been successful in their NHSCOT bid for Fatigue Risk Management (FRM) Project – The project will enable FRM practice to be embedded Group wide – **launch early 2026**.
- Staff Health Checks Fit testing and Vaccination support available for Winter Wellness weekend - **22nd & 23rd November**

Impact on Forecast

- Impact primarily on long term absence duration to bring down absence rates – analysis in progress to quantify – **Jan-26**

Metric meeting target.

Summary	<div><div>Summary:</div><ul style="list-style-type: none">The financial plan for 2025/26 in Month 7 was a surplus of £0.1m. The Trust has delivered a £0.6m deficit and is £0.7m adverse to plan. Year to date the Trust has delivered a £3.5m deficit position which is £0.7m adverse to plan.In month, the Trust recognised £0.7m of costs due to the reversal of an expected VAT benefit in relation to car parking which was recently overturned by the Supreme Court. Due to this, strike costs are now causing a pressure in the year-to-date position.The Trust continues to have higher than planned levels of No Criteria To Reside (NCTR) and high acuity driving pressures on escalation and enhanced care costs. This has led to overspends on nursing of £0.7m in month. This is offset by smaller benefits of £0.8m on contract income and other income.Elective Recovery Performance in month is driving a favourable position of £1.0m, of which £0.9m relates to over-performance against ERF activity and further £0.1m favourable variance on independent sector as activity has been moved internally. This was offset by £0.7m adverse variance on non-pay consumables to deliver activity.In month, the Trust under-delivered against the recurrent Month 7 savings target by £2.4m contributing to a shortfall against in month delivery of £1.9m. This was partially offset in month by non-recurrent savings from consultant and AfC vacancies which contributed a £0.9m favourable variance as well as £0.6m of divisional income driven by private patients and one-off benefits.<div>Key risks</div><ul style="list-style-type: none">The Month 7 financial position is dependent on non-recurrent benefits which cannot be assumed to be available throughout the year, in year savings delivery, elective recovery activity and NCTR will therefore need to be addressed if the Trust is to break even at year end, whilst divisions need to deliver within budgets.</div>	<div><div>Summary:</div><ul style="list-style-type: none">The position at the end of October is a net deficit of £8.3m against a planned deficit of £7.7m. The Trust is, therefore, adverse to plan. This is a deterioration of £0.7m from last month.Significant variances against plan are higher than planned pay expenditure (£8.1m) and increased non-pay costs (£15.1m). This is offset by higher than planned operating income (£21.7m).Total staff in post (substantive, bank and agency) has reduced since March, but staffing levels continue to exceed funded establishment with nursing budgets driving the adverse pay position due to additional use of registered mental health nurses and staffing of bed escalation areas linked to NCTR.Overall, agency and bank expenditure was higher in month compared with September, and YTD is marginally higher than planned. Agency expenditure is 15% lower than plan YTD with expenditure in month of £0.7m, compared with £0.5m in September. Bank expenditure is 3% higher than plan YTD due to the cost of industrial action, with expenditure in month of £4.4m.The number of NCTR patients has deteriorated further with a peak of 212 patients in October. This equates to almost 23% of the Trust's bed base being occupied by NCTR patients.<div>Key risks</div><ul style="list-style-type: none">The delivery of elective activity necessary to secure the Trust's planned level of income.A shortfall in savings delivery will result in failure to achieve the breakeven plan without a continued step change in delivery within Clinical Divisions and Corporate Services.Central mitigations of £25m necessary to support the breakeven plan are not fully identified. However, as at the end of October central mitigations of £21m have been identified.</div>																																								

CIP

Actual Vs Plan (YTD)

	<div><div>Latest Month</div><div>Oct-25</div><div>Year to Date Plan</div><div>£20.8m</div><div>Year to Date Actual</div><div>£16.3m</div></div> <div><div>Planned Savings v Actual</div></div>	<div><div>Latest Month</div><div>Oct-25</div><div>Year to Date Plan</div><div>£28.7m</div><div>Year to Date Actual</div><div>£29.5m</div></div> <div><div>Planned Savings v Actual</div></div>	
Summary	<div>Summary</div> <ul style="list-style-type: none">The CIP plan for 2025/26 is for savings of £40.6m with £20.8m planned delivery at Month 7.At Month 7 the Trust has £16.3m of completed schemes on the tracker, of which £1.8m is non-recurrent. There are a further £12.0m of schemes in implementation and planning, leaving a remaining £12.3m of schemes to be developed.The CIP delivery is the full year effect figure that will be delivered recurrently. Due to the start date of CIP schemes this creates a mis-match between the 2025/26 impact and the recurrent full year impact. This can be seen on the orange line on the graph above.	Summary	<div>Summary</div> <ul style="list-style-type: none">The Trust’s 2025/26 recurrent savings plan is £53.0m.The Divisional plans represent 70% or £37.1m of the Trust plans. 30% or £15.9m sits centrally with the corporate finance team.As at 31st October 2025, the Trust is reporting total savings delivery of £29.5m against a plan of £28.7m.The Trust is forecasting savings of £49.9m, an improvement of £2.0m from last month. This improvement is due to an increase in non-recurring schemes linked to the Trust’s FRP. Recurring savings represent 49% of the current forecast outturn.Against the annual savings plans of £53.0m, the current forecast savings delivery shortfall is £3.1m or 6%. The full year effect forecast outturn at month 7 is £32.8m, a forecast recurrent shortfall of £20.2m or 38%.

Summary	<div><div>Summary</div><ul style="list-style-type: none">Pay spend is £1.1m adverse in month, when adjusted for pass through items, the revised position is £0.4m adverse to plan. The main drivers are:<ul style="list-style-type: none">In year CIP - £0.8m adverse, in month impact of recurrent CIP delivery.Escalation and enhanced care - £0.7m adverse in nursing.Vacancies - £0.9m favourable, consultant vacancies in Anaesthetics and Imaging and AfC vacancies in Genetics and Facilities. Facilities and ASCR vacancies relate to Bristol Surgical Centre posts not yet fully recruited.There are other smaller underspends of £0.2m driven by vacancies in other non-ward nursing roles.</div>	<div><div>Summary</div><ul style="list-style-type: none">Total pay expenditure in October is £68.7m, £2.0m higher than plan due higher than planned bank costs and substantive staff in post exceeding establishment.Pay costs remain higher than plan YTD mainly due to the cost of nursing staffing levels exceeding planned values with levels of substantive and temporary staffing combined beyond the Trust's funded establishment by an average of 267WTE since April.Nursing staffing levels exceed the funded establishment by 190WTE in October. Contributing factors to the ongoing over-establishment are the use of escalation capacity, high levels of acuity requiring additional mental health input and sickness absence.Additional workforce controls have been put in place with effect from 1st August and the expected reduction in staff in post back to establishment remains the focus of the Clinical Divisions.</div>

In-Month Actual

£6.6m

Summary

Summary

- The Trust currently has a system capital allocation of £22.7m for 2025/26. A further £11.2m of projects have been taken forwards for national funding.
- Overall spend in Month 7 was £1.5m. This takes the overall year to date spend to £12.9m, of which £7.3m is against the Bristol Surgical Centre.
- The year-to-date variance against the forecast is as result of slippage in several projects however the Trust is still forecasting to spend all allocated capital funding in year.
- Overall spend on the Bristol Surgical Centre to date is £49.4m, of which £38.3m relates to the main construction contract.
- The Trust has received approval for a £7.3m Salix grant to be spent on decarbonisation work. This funding will be received throughout the year to match spend.

Summary

Summary

- Following NHSE confirmation of capital funding allocations of £55.2m, the Trust submitted a revised 2025/26 capital plan to NHSE on 30th April 2025 totalling £102.7m. The sources of funding include:
 - £40.5m CDEL allocations from the BNSSG ICS capital envelope;
 - £55.2m PDC matched with CDEL from NHSE including centrally allocated schemes;
 - £5.5m Right of use assets (leases); and
 - £1.5m for donated asset purchases.
- YTD expenditure at the end of October is £40.4m, £1.7m ahead of the plan of £38.7m.
- Significant variances to plan include slippage on Major Capital Schemes (£9.4m), offset by ahead of plan delivery, most notably against medical equipment (£4.4m) and right of use assets (IFRS16) (£5.8m).
- Management of the delivery of the capital plan has been revised to drive project delivery via the Trust’s Capital Group, newly formed Estates Delivery Board and the Capital Programme Board.

Summary

- In month cash is £29.5m, which is a £32.6m decrease from September
- The movement in month is driven by the release of £31m of pre-payments received from BNSSG in August & September shown in payables (deferred income)
- The cash balance has decreased by £48.4m year to date, driven by the high level of capital cash spend linked to items purchased at the end of 2024/25.
- Year-to-date cash balances are £6.2m behind plan and the year end cash balance is forecast to be £13.1m above plan, primarily driven by lower than forecast capital cash spend.

Summary

- The closing cash balance of £50.0m, is a decrease of £20.0m from September.
- The £22.3m decrease from 31st March is due to a net cash inflow from operations of £15.6m, offset by cash outflow of £31.3m relating to investing activities (i.e. capital), and cash outflow of £6.6m on financing activities (i.e. loans, leases & PDC).
- The Trust's total cash receipts in October were £97.8m to cover payroll payments of £68.2m, supplier payments of £43.3m and capital spend of £6.2m.
- YTD cash balances are £17.2m below plan. The forecast year end cash balance is being updated to incorporate the Financial Recovery Plan and will be reported next month.
